Odil Temirov, Chairman of the Board of Uzkimyosanoat JSC, held negotiations with a delegation of one of China's largest energy companies — China Coal Resources Development Group — led by its Chairman, Liu Goshen.

During the meeting, the parties reviewed prospects for expanding partnership, including the implementation of a project aimed at producing high value-added products through deep coal processing based on CTO (coal to olefins) technology.

It should be noted that China Coal Resources Development Group is a leading state-owned company of the People's Republic of China, specializing in coal mining and processing, as well as the development of a fully integrated industrial cluster covering the coal and energy sectors.
